Slot: D

Course Name: Database Management Systems

Course Faculty: Dr. Kesavan R

Project Title: National Vocational Certification and Exam Slot-Booking System

Module Photographs: (3 photographs –Module Photo, Individual student contribution module work in the project and presentation image)

Project Description: (here you write what you did in this project (contribution) including Model Description)

My contribution to the **National Vocational Certification and Exam Slot-Booking System** focused on efficient file organization and data retrieval. I implemented the **indexed-sequential organization** for the ExamAttempt archive using (center_id, exam_date, attempt_id) as the clustering key. I also designed **B+-tree indexes** on candidate_id and exam_date to support fast candidate-history and centre-wise audit queries. As part of the model, I analyzed the SQL execution plans for the major queries and verified indexed searches instead of unnecessary full-table scans. This work improved the system's data-access efficiency and demonstrated how proper file organization and indexing can support large-scale examination records and faster query processing.
